Furniture manufacturing review package

DRAFT - not approved for manufacturing
Native components: 5. Units: millimetres. Projection: third_angle
Original photograph and Neural4D mesh are estimation evidence. CAD fit is not physical accuracy verification.
Confirmed dimensions are labeled separately from CAD-derived envelope sizes.
Material species, stock allowances, grain, fixings, joinery, loads, tolerances and tooling require designer review.
Review every inferred part boundary before manufacture. No assembly sequence has been inferred.
Photo-derived approximate geometry; an unscaled single photograph cannot establish exact dimensions or hidden surfaces.
Supplied parameters are retained; inferred profiles, construction, materials and all blank envelopes require review.
Synthetic geometry, hidden joints unverified
